PAM420 Multi Function Meter

- Phase Angle Meter
- 2 channels: voltage, current and frequency meter
- Timer
- Compact and lightweight
- Local calibration
- Rechargeable batteries
- Easy to use

Description

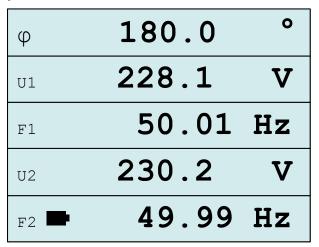

The PAM420 is specifically designed for measurements on electrical power systems. It is capable of displaying phase angle, voltage, current, frequency and timing.

The phase angle is calculated from the relationship between two power signals, which can be two currents, two voltages or any combination.

Currents up to 25 A and voltages up to 500 V can be applied directly to the instrument. The current input range can be extended by using external current transformers.

Application

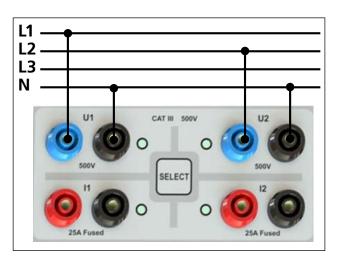

The PAM420 is suited for checking polyphase metering installations, testing protective relays, make comparative test in electrical substations, and verifying the phase angle deviation on power transformers.

Example of measured values shown on display

Features and benefits

- Direct digital reading to tenths of a degree (0.1°) does not require calculation or interpretation.
- Designed for use in substation or industrial environments transport case provided for rugged protection.
- Phase angle calculated from of any combination of two power signals to be measured giving broad application capability.
- Timer with high accuracy for contact or voltage trig.
- Local calibration.
